

How animals eat PETRA BARTÍKOVÁ & KATARINA MACUROVÁ

How animals EAT

How an ELEPHANT eats

ONE OF THE LARGEST ANIMAL EATERS LIVES IN AFRICA AND ASIA AND CONSUMES HUNDREDS OF KILOS OF FOOD PER DAY.

I'm enjoying my snack. Yummy!

Elephants weigh 7 tons, they're as heavy as a lorry.

CRUNCH!

Uh-oh!

I won't be able to see my enemies if you break off this branch!

IS THE BRANCH TOO HIGH?

NO PROBLEM FOR AN ELEPHANT, THEY JUST KNOCK DOWN THE TREE AND THE JOB'S DONE.

DON'T BE ANGRY WITH THEM. SOMETIMES THEY CAN'T FIND ENOUGH TO EAT.

My goodness!

THAT'S RIGHT, AN ELEPHANT CAN BE LEFT AND RIGHT-HANDED.

IT DEPENDS ON WHICH TUSK IS MORE USED UP.

IT GROWLS, WAVES ITS EARS,

They enjoy basking and rolling in mud.

Get wet or you'll get sunburn.

BLOOOOWS!

SPLASH! They use mud as suntan lotion.

It uses its trunk to breathe and tear up plants

WHEN IT'S HOT, ELEPHANTS THROW DIRT OR SAND ON THEMSELVES TO COOL DOWN.

THEY LIKE EATING GRASS, LEAVES, SEEDS, ROOTS, FLOWERS AND FRUIT.

They have excellent memories

They can remember places with water and where to go to drink during the dry season.

How a PENGUIN eats

SNOW, ICE AND WHITE EVERYWHERE.

WELCOME TO THE ANTARCTICA!

STONES HELP DIGEST PART OF THE CRUSTACEANS.

Do you have any more stones? Oscar's feeling sick from the last crab.

Are you kidding?

THEY HAVE WINGS BUT THEY CAN'T FLY. PENGUINS WERE DISCOVERED BY SAILORS ON THE SHORES OF SOUTH AMERICA. THEY THOUGHT PENGUIN WAS FEATHERED FISH.

YOUNG ONES STUFF THEIR BELLIES TO BURSTING WHEN EATING.

My darling big eater...

Sliding on their bellies.

They rock when they walk.

When it moults, it almost starves!

THEY SPIT OUT SALT WATER WHEN THEY SNEEZE.

SNIFF!

God bless you!

It's lovely in the south!

SPLASH!

Jumps from the water.

THEY HAVE A TONGUE LIKE A FILE, THANKS TO WHICH IT CAN HUNT IN THE SEA SMALLER, AND EVEN BIGGER FISH, VARIOUS CRUSTACEANS OR OCTOPUS.

No fish can escape

THEY JUMP IN THE WATER AND CATCH ONE AFTER THE OTHER IN A SCHOOL OF FISH.

They can dive deep.

They swallow fish whole.

They spear fish with their sharp beak. They catch a few and then swim up to take a breath.

A REMARKABLE
BOOK WITH
Playful
TYPOGRAPHY

WRITTEN BY PETRA BARTÍKOVÁ & ILLUSTRATED BY KATARÍNA MACUROVÁ

It looks like something between a beaver, a duck and an otter, and, what's more, does not have a stomach. Poor platypus! What do you think it eats? It definitely doesn't consume as much as elephant, which can eat as much as three hundred kilograms of food during one day. Just imagine, that's the weight of three newly born baby elephants. The world of animal eaters is truly remarkable. You can explore it with your first illustrated book about animals. You'll find out how animals eat.
