Coast

Let's enjoy the water. But watch out for the stinging jellyfish brought in on the current. Look under your feet, too, because there may be sea urchins in the water.

Rocks are great places to live and shelter in. Limpets and anemones stick tight to rocks and stones. Rocks also make great nesting sites and resting places for birds. Underwater rocks are good hiding places too.

If you look carefully, you may spot a flatfish on the seabed. Wow! A jellyfish has just caught its lunch. Keep a close eye on your own lunch - those cheeky gulls are on the lookout for some good grub!

In days gone by, the glow from a lighthouse would warn ships that land or a reef was nearby. These days, the work of lighthouses is done by modern technology. Even so, the beautiful buildings remain, as popular tourist destinations.

# Coast

Radka Piro • Justyna Hołubowska-Chrzęszczak

Sounds of the ocean, salt in your hair, the sun's touch on your skin, screeching gulls... Boats bobbing in the water, people having all kinds of aquatic fun... Now look closely at the beach under your feet. It is teeming with life. You may not notice much at first, so give it a few seconds. Over there between the rocks and the sand! Something moved!

In the shallow sea water too! Do you know all its inhabitants? Now is the perfect time to get your feet wet with us and explore this weird and wonderful world.

Explore variously shaped pages and die cuts!

Learn more about coasts in the world.

Find out who lives on the coast!
