All About Air

A Fun Sticker Workbook for Kids!

Illustrated by Lia Visirin

MORE THAN
270
STICKERS

AIR IS ALL AROUND US

Our planet breathes just like we do—with two giant “lungs”: the forests and the oceans!

Fill the ocean lung with fish, whales and phytoplankton—tiny organisms that produce oxygen similarly to plants in the forest. Then, fill the forest lung with plants, birds, and other animals. Make the page come alive with life!

AMAZING ATMOSPHERE

Earth is wrapped in a layer of gases called the atmosphere. It's like an invisible shield—it keeps us safe, warm, and helps us breathe. Now add the right stickers to each layer!

EXOSPHERE

The edge of space. This topmost layer slowly fades into outer space. It's where many satellites orbit.

THERMOSPHERE

Though it feels freezing to us, this layer is super-hot, thanks to the Sun's energy. It's where glowing lights called auroras dance around.

MESOSPHERE

Brr, it's so cold here! This is where meteors—tiny bits of cosmic dust—burn up as “shooting stars.”

STRATOSPHERE

Military and spy planes soar in this calm, almost cloudless layer. It's also home to the ozone layer, which protects us from harmful ultraviolet rays.

TROPOSPHERE

This is where we live. It has all the weather, clouds, and water vapor—and all life. Planes and helicopters fly here too.

Too many greenhouse gases make Earth too hot. Look at the circled items—each adds to the problem. What can we do to help?

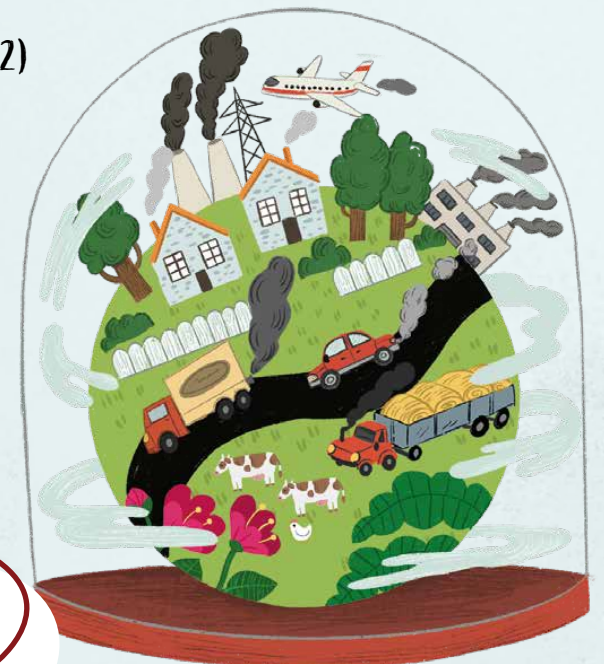

Greenhouse gases help keep Earth warm—without them, it would be super cold! Some are natural, but others come from things people do.

Find 13 differences between the two images and circle them.

IN THE SKY

Air also helps make weather. When it's moist, it holds water vapor that turns into clouds. Most clouds look white because they reflect sunlight. Dark clouds mean rain is coming. Clouds come in different shapes—add the stickers to see which is which.

ALTOSTRATUS
High gray sheets.

CIRRUS
High, wispy clouds made of tiny ice crystals.

CIRROCUMULUS
Tiny cotton clouds.

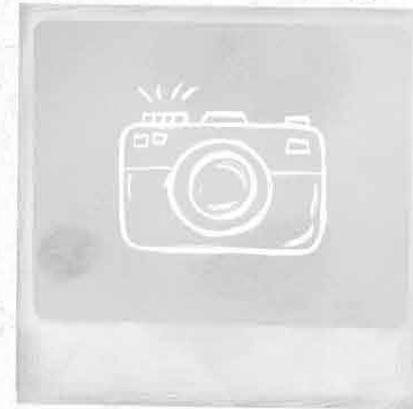

NIMBOSTRATUS
Rainy clouds.

STRATOCUMULUS
Lumpy low clouds.

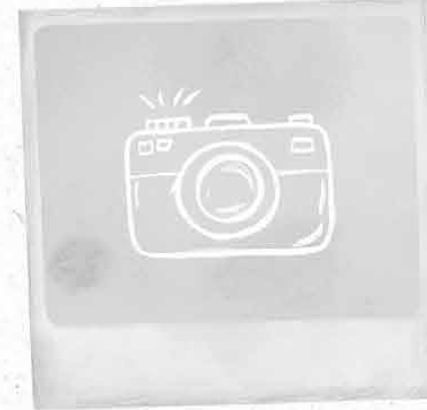

STRATUS
Low, gray, fog-like clouds.

Draw the silliest shape you can imagine in a cloud!

Did you know that the sky is full of breathtaking—and sometimes tricky—phenomena? Read the short descriptions in the boxes and match each with the correct sticker.

The colorful lights in the sky come from solar particles trapped by Earth's magnetic field.

The further away mountains are, the more air we look through between us and them, making them look blue.

The bending of light over the hot ocean can create the illusion of ships flying in the sky. These ships are known as Flying Dutchman.

CUMULUS
Puffy clouds that look like "cauliflowers" due to rising air currents.

COMPLETE YOUR DRAGON KITE!

All About Air

A Fun Sticker Workbook for Kids!

Come explore the amazing world of air—from flying insects and birds to using the wind to make power! Learn how the Earth's atmosphere protects us, helps plants and animals breathe, and creates weather and storms. With over 270 stickers, puzzles, and activities, kids will also find out how to keep our air clean—all while building vocabulary, science skills, and fine motor coordination.

Perfect for curious kids ready for an exciting adventure in the sky... and beyond!
