Vili the little witch from St Wendelin's School of Witchcraft has a tough test ahead. To make it to the next school year, she must mix a healing potion correctly. When mixing a potion, you need to get the measurements just right. If you don't, you might accidentally give the headmistress a wart the size of a raspberry! Vili sometimes gets her numbers wrong... Can you help her? First, Vili must pour exactly **ONE** cup of water of life into her cauldron, taking care not to pour in **TWO** cups by mistake!

When mixing a potion, you need to get the measurements just right. If you don't, you might accidentally give the headmistress a wart the size of a raspberry! Vili sometimes gets her numbers wrong... Can you help her? First, Vili must pour exactly **ONE** cup of water of life into her cauldron, taking care not to pour in **TWO** cups by mistake!
That's right, this is **ONE** cup of water. The opening part of the task is done. Phew!

To cure any disease, a potion must contain exactly **FIVE** toadstools. But where are they?

No, these are **SIX** toadstools.
If Vili used them all, the water
in her cauldron would evaporate!

To cure any disease, a potion
must contain exactly **FIVE**
toadstools. But where are they?

That's right, these are **FIVE**
toadstools. Vili can safely put
them in her cauldron.

That's right, these are **NINE** socks discarded by the school centipede. Now Vili's cauldron is bubbling nicely...

To finish, Vili must add to the potion exactly **NINE** socks that are now too small for the school centipede. Which ones are they?

Vili has done it! To her great relief, her healing potion is a success. Hurray! What's more, she can finally count! Vili is proud of herself. Her potion is in this year's top ten! To prove that you, too, can count, check that all **TEN** of the school's top potion-makers have shown up for the celebratory photo shoot.

THREE or FOUR?

A little witch called Vili is mixing her first potion. Magic is tricky: every ingredient must be measured exactly. When counting how much of each she needs, Vili would really appreciate your help.

This interactive book with pull tabs teaches children their first numbers through play, as well as training their attention. A little mathematics can turn into a magical adventure!
